Your Formulary

This Formulary outlines the most commonly prescribed medications from your plan's complete pharmacy benefit coverage list, also known as a Prescription Drug List (PDL). A formulary identifies the drugs available for certain conditions and organizes them into cost levels, also known as tiers. An important part of the Formulary is giving you choices so you and your doctor can choose the best course of treatment for you.

Go to your plan's member website for complete and up-to-date drug information

Since the Formulary may change, we encourage you to visit our website, your plan's member website, which should be listed on your ID card. This website is the best source for up-to-date information about all of the medications your pharmacy benefit covers, possible lower-cost options and cost comparisons.

At OptumRx, we want to help you better understand your medication options.

Your pharmacy benefit offers flexibility and choice in determining the right medication for you. To help you get the most out of your pharmacy benefit, we've included some of the most commonly asked questions about the Formulary.

What is a Formulary?

This document is a list of commonly prescribed medications preferred by your plan sponsor for their safety, cost and effectiveness. Drugs are listed by common categories or class. They are placed into cost levels known as tiers. It includes both brand and generic prescription medications approved by the U.S. Food and Drug Administration (FDA).

Please note: Where differences are noted between this Formulary and your benefit plan documents, the benefit plan documents will rule. It is not intended to be a complete list of medications, and not all medications listed may be covered under your plan. Please look at your benefit plan documents provided by your employer or plan sponsor to see what medications are covered under your plan. You may also log on to your plan's member website or call the toll-free member phone number on your ID card for more information.

How do I use my Formulary?

When choosing a medication, you and your doctor should consult the Formulary. It will help you and your doctor choose the most cost-effective prescription drugs. This guide tells you if a medication is generic or brand, and if special rules apply. Bring this list with you when you see your doctor. It is organized by common medical conditions. Medications are then listed alphabetically.

If your medication is not listed in this document, please visit your plan's member website or call the toll-free member phone number on your ID card.

When does the Formulary change?

- Medications may move to a lower tier at any time.
- Medications may move to a higher tier when its generic becomes available.
- Medications may move to a higher tier or be excluded from coverage on January 1 or July 1 of each year.

When a medication changes tiers, you may have to pay a different amount for that medication.

For the most up-to-date list, call customer service at the toll-free member phone number on your ID card.

What are tiers?

Tiers are the different cost levels you pay for a medication. Each tier is assigned a cost, which is determined by your employer or plan sponsor. This is how much you will pay when you fill a prescription. Tier 1 medications are your lowest-cost options. If your medication is placed in Tier 2 or 3, look to see if there is a Tier 1 option available. Discuss these options with your doctor.

Check your benefit plan documents to find out your specific pharmacy plan costs.

\$	Drug Tier	Includes	Helpful Tips
	Tier 1 Lowest Cost	Generic drugs.	Use Tier 1 drugs for the lowest out-of-pocket costs.
	Tier 2 Mid-range Cost	Single-source brand drugs.	Use Tier 2 drugs, instead of Tier 3, to help reduce your out-of-pocket costs.
	Tier 3 Highest Cost	Multi-source brand drugs.	Many Tier 3 drugs have lower-cost options in Tier 1 or 2. Ask your doctor if they could work for you.

Please note: Some plans may have two or four tiers, while others may not have any. If you have a high deductible plan, the tier cost levels will apply once you hit your deductible. Refer to your enrollment and plan materials on your plan's member website, or call the toll-free member phone number on your ID card for more information about your benefit plan.

Why are some medications excluded from coverage?

Medications may be excluded from coverage under your pharmacy benefit when it works the same as or similar to another prescription medication or an over-the-counter (OTC) medication. There may be other medication options available.

What if I don't agree with a decision about an excluded medication?

You (or your authorized representative) and your doctor can ask for an initial coverage decision by calling the toll-free member phone number on the back of your ID card.

Should I talk to my doctor about OTC medications?

An OTC medication may be the right treatment option for some conditions. Talk to your doctor about available OTC options. Even though these medications may not be covered under your pharmacy benefit, they may cost less than your out-of-pocket expense for prescription medications.

What is the difference between brand-name and generic medications?

Generic medications contain the same active ingredients (what makes the medication work) as brand-name medications, but they often cost less. Once the patent of a brand-name medication ends, the FDA can approve a generic version with the same active ingredients. These types of medications are known as generic medications. Sometimes the same company that makes a brand-name medication also makes the generic version.

Is it a generic or brand-name drug?

The drug list shows **brand-name** drugs in **bold** type (for example, **Clobex**) and generic drugs in plain type (for example, clobetasol).

What if my doctor writes a brand-name prescription?

The next time your doctor gives you a prescription for a brand-name medication, ask if a generic equivalent or lower-cost option is available and if it might be right for you. Generic medications are usually your lowest-cost option, but not always. Visit your plan's member website to make sure.

Are you taking a specialty medication?

Specialty medications treat rare or complex conditions and are typically higher cost medications. Please note, not all specialty medications are listed in the Formulary.

BriovaRx, the OptumRx specialty pharmacy, can provide most of your specialty medications along with helpful programs and services. Call BriovaRx and have your prescriptions delivered right to your home or office.
